

## 3D High Definition Facelifting Creates Natural Rejuvenation

---

Dr. Sam Rizk is Director of Manhattan Facial Plastic Surgery, a state-of-the-art, JCAHO-accredited surgical suite on Park Avenue. He specializes in performing the most modern techniques and customized face and necklifts which beautifully define the jawline and produce a youthful appearance without a tightly pulled or “wind-blown” look. His Rapid Recovery approach with undetectable hidden scars are the landmarks of his philosophy; he performs a range of full and partial lifts, including isolated neck lifts and new techniques for male neck lifts without the telltale signs of surgery. Dr. Rizk’s signature deep plane lower face and necklift technique redistributes the jowl fat back to its youthful home in the cheekbones, producing a natural, aesthetically-pleasing rejuvenation. He has also pioneered the use of a 3D High Definition telescope system to visualize face and neck structures from smaller hairline and ear incisions. His novel use of tissue glues instead of drains results in less bruising and swelling so patients can return to their lives as quickly as possible. The results of facial rejuvenation procedures can be further enhanced by fractional laser resurfacing.
