Have you ever wondered how our Haute Beauty experts stay at the top of their game? This exploration reveals the methods used by our beloved doctors and medical experts to remain at the forefront of innovation. From groundbreaking research to the seamless integration of cutting-edge technologies, these professionals embody a commitment to staying updated on the latest advancements and practices. Welcome to a world where the future of beauty is unlocked by the dedication of those who lead the way.

### **Dr. Sam Rizk | Face | Manhattan, NY**

---

Early in my career, I learned the importance of embracing every opportunity to learn. Travel is a huge part of this; it's crucial for me to get out there and see what facial plastic surgery looks like in other parts of the world. Not long ago, I took the opportunity to run a Brazilian facial plastic surgery section in Sao Paulo, and I spent a lot of time teaching at conferences around the globe. Over the years, I've developed symbiotic relationships with some of the top surgeons in the world, and we are constantly traveling back and forth to observe each other's most innovative procedures.

Without this commitment to learning and growing, I would not have been able to perfect my deep facelift/neck lift procedure. I am one of just a few surgeons globally who do not use a postoperative drain, which results in less post-op pain, infection risk, trauma to skin and blood vessels, and bruising. This is a procedure that heals very quickly and results in a very natural, unpulled look with very few if any, side effects. I've been doing this procedure for more than 20 years—that's over 2,000 facelifts!

I just returned from the Baker Gordon Symposium in Miami, an international event that focuses on the aesthetic and technical concepts that produce natural results. In early April, I'll be presenting the evolution of my deep plane facelift technique at the annual conference of the American Academy of Facial Plastic and Reconstructive Surgery (AAFPRS). Also, I've just been asked to perform a live extended deep plane

facelift with tissue glue during next year's meeting in Miami. It's a huge honor to be able to share my lifelong work with the world's leading experts in facial plastic and reconstructive surgery.
